

Centralized monitoring to support quality patient care

Whether you're caring for one laboring patient or many, choose a central monitoring system that empowers your staff with clear information to help improve efficiency, standardize communication, and make informed decisions at the bedside.

Work Smarter, Not Harder

PeriWatch Surveillance is an advanced centralized surveillance and documentation system that can incorporate the only automated fetal and maternal early warning system commercially available in the United States.

Advantages for Your Organization

- ✓ **Streamline documentation workflows**
Provides a natural flow of documentation screens with industry-standard EMR integration to support seamless, timely documentation.
- ✓ **Embed PeriWatch Vigilance®**
Keep watch over potentially concerning trends with the option to embed color-coded, early-warning notifications directly into the system when deployed alongside PeriWatch Vigilance.
- ✓ **Works with industry-standard EMRs**
Includes single sign-on capabilities, active directory, auto-admit, and discharge.
- ✓ **Enable resilient data collection**
Securely capture fetal tracings with robust data collection architecture that protects against planned or unplanned system or network downtime.

Product Features

- ✓ **Patient census**
Get a comprehensive, HIPAA-compliant view of all active patients with configurable columns and colors.
- ✓ **Central surveillance**
Monitor up to 30 patients on one screen with easy configuration as the census changes, and trend through each tracing independently.
- ✓ **Bedside surveillance**
Help clinicians document naturally with easy trending, smooth navigation, and screens shaped by clinical input — available in both single and dual-screen layouts.
- ✓ **Threshold alerts**
Patient alerts can be configured to match your facility's guidelines.
- ✓ **FHR assessments, annotations, and exams**
Add customizable and EMR-matching annotations directly on the tracing, navigate customizable documentation screens, and auto-export FHR assessments to facilitate timely documentation.
- ✓ **Immediate patient capture**
Data gathering starts when the mother is placed on a monitor, even before admission.
- ✓ **Bi-directional interfacing**
Whether you prefer to chart in the EMR or in PeriWatch Surveillance, your documentation will automatically sync between both systems.
- ✓ **Archiving**
Retrieve previous patient visits quickly, including EFM tracings and documentation.
